

Future Disease Prediction

HackIndore 2.0
By HashInclude

Team: AcidGreen

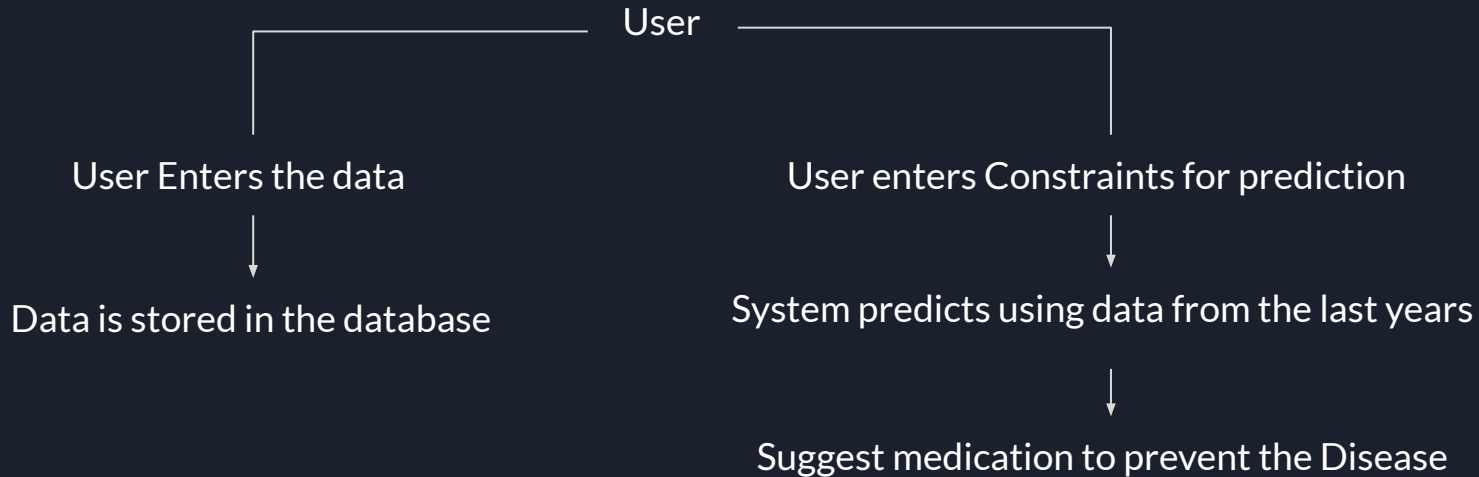

Objectives of the Statement:

- ❑ Predict the Disease which could occur in the mere future using previously entered data by the user.
- ❑ Recommend Medication which ailed you previously

Basic Outline of the Project

How does it work?

User enters the data regarding Climate and Season in the system.

System searches in the database for the matching set of conditions previously occurred.

Counts the times when the conditions are satisfied.

Display the situation which is more repeated.

Report the disease which is more likely to occur.

Suggest the medication which has proved beneficial for ailment or prevention.

Aspects which are covered

User don't need to worry about the diseases which could be easily be caught due to negligence.

User can monitor which things he can prevent to avoid getting infected.

User can improve his health since regular illness leads to weaker immunity.

Some additional functionality which could be added

Direct medicine buying links could be added to enhance user convenience.

Some random cases of various issues due to the environment and aging can also be predicted with quite good accuracy.

Notifications regarding health events organised near the user's residence could also be added.

If user has some long term illness and needs special medicines or care during some climatic conditions he/she could set auto delivery for required special medications such as Asthma, Lung Infection, Allergy, etc.
